Installation to the Leviathan-V2 optical

- This switch is designed to be placed on the bolt catch on the M4 type of airsoft guns and it works only with Leviathan-V2 optical.
 - It adds new function virtual reload, which is used to reset the magazine capacity to the set amount.
 - In some guns is necessary to grind bolt catch or lower received to fit wires from the switch.
 - Solder 2 black wires to the leviathan board INPUT port (SIG and GND pad) - see 2 red areas in the pic.
 - It doesn't matter which wire goes to which pad.
 - Use super glue to stick board with switch at the inner part of bolt catch.
- DO NOT GLUE THE SWITCH!**
- In the „Leviathan by jefftron“ app use interface „External input“ to activate function „Virtual reload“, set „virtual magazine“ capacity.

WARNING: Installation requires advanced soldering skills! Wires can't touch other pads and components on the board. Damage to the Leviathan will void the warranty!
